Introduction

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

The Emergi-Lite portfolio from Thomas & Betts delivers a highly versatile choice of emergency lighting and fire detection products and systems for a wide range of applications. Our aim is to enable customers to achieve the maximum benefit in investment. This is gained through product design, for quick and simple installation with inherent energy efficiency and minimum maintenance, whilst keeping the protection and safety of human life paramount.

Since 1998, the Emergi-Lite brand has been included in the product portfolio of the Thomas & Betts Corporation.

In 1898 Thomas & Betts was founded in New York. The corporate headquarters now reside in Memphis, Tennessee with the company being listed on the New York stock exchange. Thomas & Betts has now over 100 years of experience of successfully supplying quality products to the market by using innovative design and manufacturing techniques. A truly global player having a presence in Europe, North & Central America, Australia and the Far & Middle East. Worldwide 13,000 employees are dedicated to ensuring that Thomas & Betts is fast, flexible and customer focused.

Whilst one of our main businesses remains in electrical products, principally Emergency Lighting and Fire Detection Systems, Thomas & Betts also has leading brands along with significant market share in Steel Structures, Communications, Electronic Systems Protection and Earthing & Lightning Protection.

In recent years, Thomas & Betts has developed a formidable European safety products division, the principal products of which are emergency lighting and fire detection systems. This division serves as a key knowledge platform. Emergi-Lite being one of the leading brands within this division, benefits from the economies of scale in product development and production, facilitating the efficient further development of emergency lighting and fire detection technology.

Waste Electrical and Electronic Equipment Regulations 2006 ("the WEEE Regulations")

The Government has introduced the Waste Electrical and Electronic Equipment Regulation 2006 ("WEEE"), which has been effective from 1st July 2007.

LUMICOM MEMBER

Producer Responsibility
Thomas & Betts Ltd (Emergi-Lite Safety Systems) meets its producer responsibility via membership of the Lumicom Producer Compliance Scheme (registration no. WEEE/DH0073UQ). Under this scheme, de-polluted luminaires (i.e. those with the lamps, batteries and liquid filled capacitors removed), which are being replaced by our fittings, will be recycled in an environmentally sound manner.

Recycling Cost
Producers (or their agents) are required to finance the environmentally sound disposal of non-household luminaires and the gas discharge lamps within them. Therefore there will be a recycling charge, which may vary from time to time.

Battery Directive
Battery Producer recycling registration number: BPRN00373.

Welcome to Emergi-Lite

When choosing a partner for emergency lighting, you need a supplier capable of delivering a solution whenever the need arises, whether you're planning a new build project, overseeing an installation, or considering renewal of a long-standing system.

By choosing Emergi-Lite as your emergency lighting partner, you'll be placing your projects, your systems, and essentially your people, in safe hands.

Emergi-Lite is a leading life safety solutions provider, delivering state-of-the-art systems and products into the emergency lighting marketplace.

Emergi-Lite focuses on supporting our customers at all points of the emergency lighting life-cycle, whether planning, installing, managing or renewing:

Planning
From project consultations at customer premises, to drafting certified technical drawings, Emergi-Lite is ready to support all your emergency lighting needs.

Installing
The right products, delivered at the right time, to ensure your installations run smoothly - on time and on budget.

Managing
The clear and precise after-sales support you would expect from a leading emergency lighting supplier, including servicing, maintenance and readily-available replacement parts.

Renewing
Keeping you up-to-date with the latest standards, industry developments and new product innovations, making renewing your emergency lighting a simple, straightforward process.

Emergi-Lite: with you every step of the emergency lighting process

With every emergency lighting project, there is a clear and important need for effective planning and preparation.

Products need to be assessed, customer requirements defined, building regulations respected and design drawings prepared.

With project time-lines tight and budgets constrained, choosing the right partner for emergency lighting system design is imperative. By choosing Emergi-Lite, you'll be making the right start.

Emergi-Lite works at the heart of this complex process, assisting designers, specifiers, and final customers with all manner of emergency lighting need.

From project consultation, to certified technical drawings, Emergi-Lite is here to help.

Emergi-Lite delivers solutions that work across the spectrum of emergency lighting systems, and impact at all points of the emergency lighting life-cycle.

Our products and services are specifically designed to provide the most effective protection and safety, in line with customer needs, relevant standards and industry regulations.

These solutions start at the planning stage for emergency lighting systems, with advice on product selection and system requirements, through to delivery of certified technical drawings.

Project consultation

When designing emergency lighting systems, it is important to have the most complete and accurate information available, and the best possible advice on regulations, standards and safety requirements.

This catalogue makes for a great starting point when considering emergency lighting, but is only a small part of our service.

That's why you should call us, and count on us to help with your emergency lighting planning.

We offer expert assistance in emergency lighting scheme design, and clear, concise advice on product selection.

Our sales managers are able to assist you at your premises, and arrange for emergency lighting schemes to be prepared at our design office in Leeds.

Certified technical design

Central to emergency lighting is the technical design drawing. It defines luminaire positioning and spacing, drives the installation effort and provides the key control for commissioning and approval.

Our technical design team is on hand to prepare drawings for all types of emergency lighting system, to the latest relevant standards.

Not only can drawings be prepared, but we also offer certification of all emergency lighting systems installed to our drawings, for added confidence and peace of mind.

Emergi-Lite, Bruntcliffe Lane, Morley, Leeds, LS27 9LL • Tel: +44 (0)113 281 0600 • Web: www.emergi-lite.co.uk

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

During building construction or refurbishment, the focus for emergency lighting shifts from planning and design, to delivery and installation.

At this point, project support and product availability become crucial.

Here, choosing an emergency lighting partner with the capability to deliver becomes a critical factor.

Emergi-Lite has many years' experience of supporting emergency lighting projects, backed by friendly service, technical expertise and our continual drive towards new product innovation.

Our solutions are designed and engineered for optimum performance, with our customer service and technical teams ready to assist.

Construction engineers and installers are assured that orders can be easily placed, deliveries arrive promptly, and that any issues are resolved quickly to a satisfactory outcome.

Project support

Our project engineers and internal sales support teams are available to provide guidance on products and project updates/delivery schedules etc.

Call our sales helpline for advice and assistance.

Customer sales/technical advice line:

Tel: +44 (0) 113 281 0610 / 0600
Fax: +44 (0) 113 281 0611

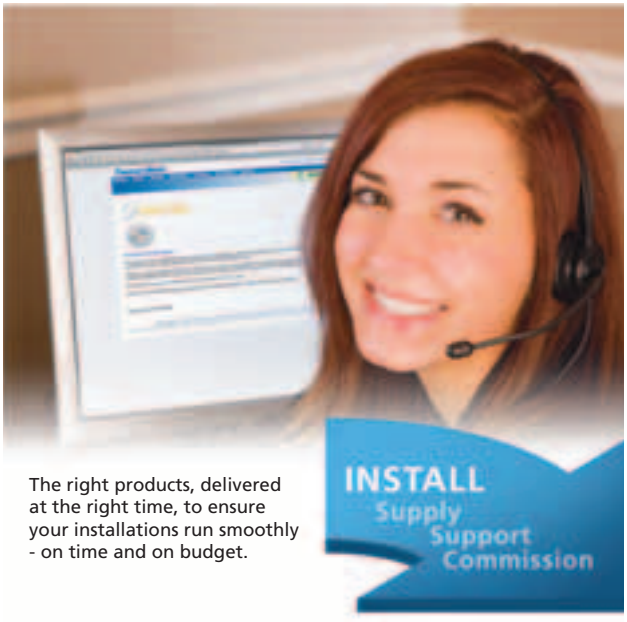
Calls may be monitored to assist with sales training and our customer care programme.

Simple, timely product delivery

With emergency lighting being our core product we maintain healthy stock levels at our facility in Leeds, ready for delivery.

Emergi-Lite products are also available through our wholesale partners nationwide. We will be pleased to provide details of your local stockist.

Where products need to be exported, we can provide advice and support on your specific requirements.



The right products, delivered at the right time, to ensure your installations run smoothly - on time and on budget.

Easy-to-install product range

Many of our products are engineered to a modular design format, which promotes straightforward, cost-effective installation and maintenance.

Modular design enables first-fix installation of the key wiring components with later connection of geartrays, diffusers and legends etc, for easy management and replacement of parts.

Emergency lighting commissioning

Emergency lighting systems must be commissioned following installation, prior to use.

Emergi-Lite can provide advice and assistance for commissioning self-contained emergency lighting systems.

Furthermore, Emergi-Lite's service team provides a commissioning service for our central addressable testing and central power supply systems, to ensure the installation meets with the necessary approvals.

Contact Emergi-Lite for more details.

The purpose of an emergency lighting system is to protect and safeguard life.

Once commissioned and in operation, the emergency lighting system must function correctly throughout its lifetime and therefore requires ongoing management, maintenance and testing.

This need for testing and servicing is enforced by legislation, with both The Regulatory Reform (Fire Safety) Order 2005/Fire (Scotland) Act 2005 and The Work Place Directive 89/654 making reference to proper maintenance of emergency lighting systems.

Any faults found need to be rectified as quickly as possible.

Investment in emergency lighting is an investment for the long term. For many building owners/occupiers, who have legal responsibility for these systems, maintenance, testing and access to replacement parts are of paramount importance.

With this in mind, it's clear to see that maintaining the partnership with your emergency lighting supplier, even after commissioning, is highly important.

At Emergi-Lite, we continue to support our customers after installation, with our complete and comprehensive after-sales service.

Maintenance and servicing

Our team of qualified and experienced service engineers is available to service emergency lighting systems, to ensure full working order in line with appropriate British Standards. Recommended spares only are used.

Term maintenance contracts are available. Contact our service team today to discuss your maintenance needs.

Emergi-Lite testing solutions

SELF-TEST

Each luminaire includes an in-built test facility with internal timer for programmed testing.

IR2

Luminaire tests are initiated via remote control, eliminating the need for costly wiring installation.

Centrel

Each luminaire is coded with an electronic address and tests can be implemented from the user's control panel or PC, with records held digitally.

Clear and precise after-sales support, including servicing, maintenance and readily-available replacement parts.

System testing & upgrades

Owner/occupiers are legally obliged to test and maintain emergency lighting to BS 5266-1 and -8 (Simplified Testing Regime EN 50172).

Emergi-Lite manufactures a range of testing solutions for self-contained emergency lighting - Self-Test, IR2 and Centrel addressable testing - to accommodate all levels of testing requirement.

These testing solutions provide the essential tool to assist owner/occupiers with ongoing monthly and yearly testing of emergency lighting systems.

See pages 70 - 75 for more details of our current testing solutions, or contact Emergi-Lite direct.

Making you aware of the latest standards, industry developments and product innovations, so renewal and refurbishment is a simple, straightforward process.

Renewal and refurbishment completes the emergency lighting life-cycle.

Inevitably, all emergency lighting systems require renewal, as new products develop, standards change, and the ongoing cost of maintaining the current system becomes excessive.

At this point our products and services continue to play a major part.

In addition to keeping you up-to-date with new industry developments, our sales and technical teams are happy to review existing plans and specifications to advise on new and better product options.

Our customer services teams are on hand for ordering new luminaires and replacement parts.

Emergency lighting seminars

CPD-Accredited Training Course – Emergency lighting, testing and monitoring

Our CPD-accredited training course is designed to ensure you're always kept up-to-date with the latest emergency lighting requirements, regulations and standards.

This fully interactive training course is available to consultants, specifiers, installers, facilities managers and other parties who are looking to gain an in-depth understanding of emergency lighting legislative and testing requirements.

The course details the correct procedures for testing and monitoring all emergency lighting, in accordance with British Standards, Codes of Practice and current Working Directives, along with the methodologies best used to maximise effectiveness and efficiency of your installations.

Contact Emergi-Lite for further details.

Product development & recycling

Emergi-Lite products are designed with the future in mind.

Our focus on new product development ensures we're always in a strong position to deliver new innovations into the emergency lighting marketplace.

Our products are manufactured using sustainable, environment-friendly materials and many now benefit from modular construction and LED technology, promoting longer lifetimes and lower recycling demand.

In addition, since we're a member of Lumicom, recycling of our luminaires is a quick and easy process (see www.lumicom.com).

Emergi-Lite also has battery recycling registration to meet the requirements of the Battery Directive (Battery Producer registration number BPRN00373).

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

Serenga®

- *Comprehensive LED based exit sign and downlighter range*
- *Designed to combine optimum performance and modern styling with low operating costs and energy consumption*
- *Ideal for modern, high profile construction projects*

Serenga: a new approach to emergency lighting

Serenga is a modular LED based emergency lighting system, combining a versatile range of exit signs with high specification downlighters to provide a complete solution across the design scheme.

The Serenga system has been designed to deliver the optimum solution for emergency lighting, at all stages of the construction cycle - from initial project planning, through to installation, maintenance and testing.

Why choose Serenga?

Serenga is the smart choice for emergency lighting. It delivers more than any other comparable emergency lighting solution:

LED technology for long-life performance

LEDs are highly energy efficient with low ongoing maintenance requirements. Serenga delivers significant energy savings compared to 8 Watt fluorescents, with a lamp lifetime of up to 12 years.

Modular design for flexibility

Serenga modular design principles permit a high level of flexibility during planning and installation, with easy assembly and disassembly of parts.

A variety of exit sign combinations is available through selection of four simple components, supported by a range of modular, first-fix downlighters for emergency illumination.

Optimised light distribution

Serenga products are specifically designed to deliver optimised light distribution across escape routes and open areas. Even Serenga Escape 4 LED exit signs further increase on already exceptional spacing provided by the LED downlighters.

Enhanced functionality for added value

Serenga units can provide night lighting to cut energy costs and for security, e.g. to deter theft at schools, shops and businesses etc. Low level night lighting assists security patrols, or night workers in hospitals, care homes etc to carry out their duties.

Dimming controls can be linked to standard Serenga units to permit LEDs to dim in normal operation, ideal for theatres, cinemas, restaurants etc.

Lower overall cost of ownership

Emergency lighting systems operate for many years, but require regular testing and maintenance. Every system has an ongoing cost, with buyers aware that total cost of ownership is a major consideration.

With low energy, low maintenance LED technology, Serenga easily surpasses traditional 8 Watt fluorescents in creating savings over the lifetime of the system.

Serenga: the complete emergency lighting solution

Serenga offers the complete, modern and innovative solution to the needs of emergency lighting specifiers and users.

All key requirements have been considered. Open area, escape route and exit sign luminaires are readily available, all providing superb soft illumination via high brightness LEDs.

Consultants, architects, specifiers, installers and building managers are therefore assured that Serenga is the right choice for reliable, cost effective emergency lighting.

The reference chart below establishes clearly how choosing Serenga benefits all parties involved in the emergency lighting life-cycle.

	Serenga Escape exit signs	Serenga Sun-Lite
Planning ● Enhanced modular design ● Project-wide application ● Comprehensive product range ● Multiple mounting options ● Exit legend kit included ● Optimised light distribution ● Exit signs with 4 LEDs can be used in spacing calculations ● Enhanced functionality - night/security lighting ● Dimmable lighting option		Installation ● Rapid installation via first-fix modular bases ● Solutions for solid and suspended ceilings ● Multiple mounting options for LED exit signs with no separate bracket required ● Design flexibility through easy replacement of legend kits ● Clear installation instructions		Management ● In-built intelligent Self-Test assists maintenance ● Central testing variants available ● LED promotes low energy/maintenance costs ● Long-life LED (up to 12 years) ● Easy modular replacement of parts ● Low overall cost of ownership with significant savings compared to 8 Watt T5 FL ● 4 Year warranty ● As low energy night lighting Serenga promotes better energy conservation		
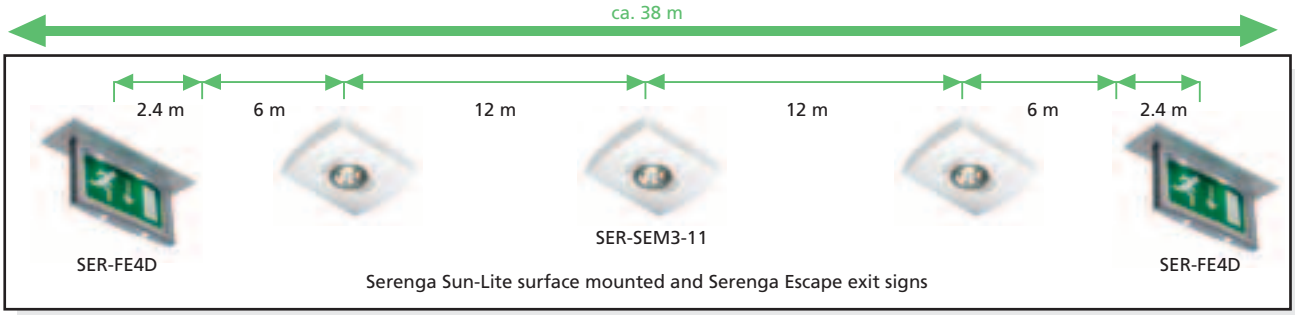
Renewal ● Straightforward disassembly of parts ● Sustainable, environmentally friendly materials ● Disposal via Lumicom scheme		
For Serenga Escape exit signs see pages 12 - 16.
For Serenga downlighters see pages 17 - 23.

Emergi-Lite, Bruntcliffe Lane, Morley, Leeds, LS27 9LL • Tel: +44 (0)113 281 0600 • Web: www.emergi-lite.co.uk

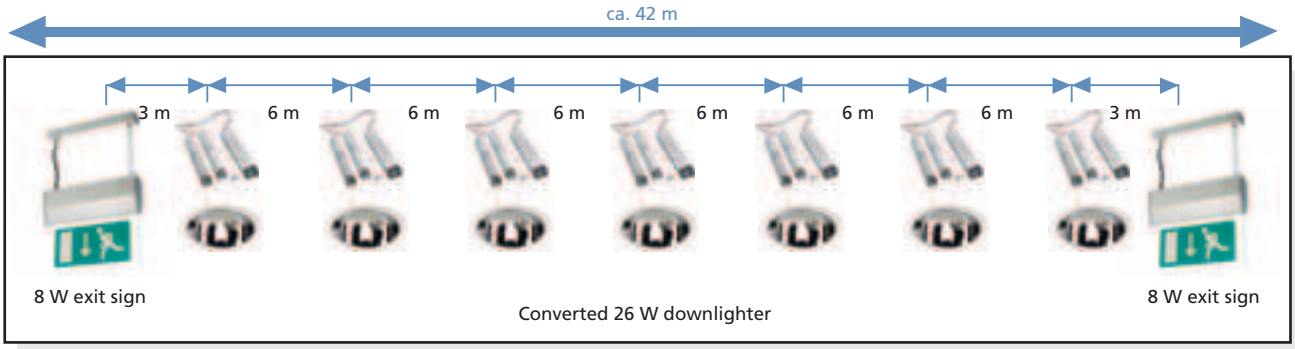
Serenga delivers value in installation and over the long term

The illustrations below compare use of Serenga exit signs and downlighters in comparison to mains converted downlighters and 8 Watt exit signs, along a corridor approximately 38 metres in length.

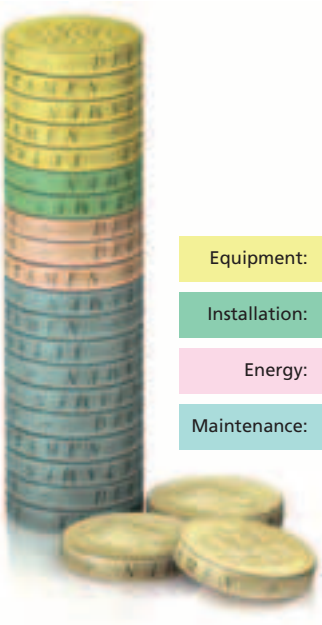
As can clearly be seen, Serenga achieves the lux requirement for escape routes using much fewer luminaires, leading to significant savings.



Serenga Sun-Lite surface mounted and Serenga Escape exit signs



Converted 26 W downlighter



Equipment:	£929.00
Installation:	£355.00
Energy:	£761.00
Maintenance:	£2052.00

Total cost of ownership (12 years): **£4097.00**

Average savings over £210 per year by choosing Serenga

Serenga

Equipment:	£948.00
Installation:	£300.00
Energy:	£129.00
Maintenance:	£216.00

Total cost of ownership (12 years): **£1593.00**

Total savings over 60% for the lifetime of the system

How much will you save?

The example shown outlines the estimated comparable cost saving between a Serenga LED and converted luminaire installation, over a 38 m escape route.

Calculation based on the expected 12 year lamp lifetime of Serenga LEDs.

Individual cost items may vary over time and the example is for guidance only.

For specific project cost comparisons please contact Emergi-Lite sales department.

Serenga Escape exit signs

Serenga Escape is a high specification, practical LED based emergency exit sign system.

Contemporary in design, Serenga Escape is ideal for modern commercial and public sector settings, such as offices, schools, shops and hotels.

Robust in construction, the system performs equally well in more demanding environments, including light industrial units and storage facilities.

Serenga Escape benefits from modular construction principles, promoting maximum flexibility at all points in the emergency lighting life-cycle, and offering tremendous scope to designers, installers and building users alike.

Flexible design

The high level of versatility in application makes Serenga Escape stand out from the crowd.

A number of design combinations are possible from four easy-to-assemble product components - the control assembly, smart-frame, legend panel and mounting accessory.

Simply put, designers and specifiers now have the opportunity to choose an exit sign to match all their interior design considerations.

In addition, two exit sign variants are available, a 2 LED exit sign, and an enhanced 4 LED exit sign with integral downlighters, enabling designers to include Serenga Escape luminaires in emergency lighting illuminance calculations.

Key benefits of Serenga Escape:

- Low cost, low energy LED based solution
- Four components, multiple combinations
- Modular design for maximum flexibility
- Interchangeable components readily assemble to first-fix principles
- 4 LED version provides additional emergency lighting
- Intelligent Self-Test included as standard
- Central addressable test versions available
- Dimmable versions available for standard exit signs (contact Emergi-Lite for details)

Flexible installation

All components are interchangeable and readily assemble to a first-fix principle.

The unique SmartLocker© feature of the electronic control module makes it possible to secure the control module and smart-frame to the first-fix plate with a simple 'locate, click and fit' action.

Legend panels clip-fit into place, so are easily replaceable without changing the entire unit.

Low cost, low maintenance

LED technology is renowned for being the energy saving, environmentally friendly alternative to traditional fluorescent emergency lighting.

Serenga Escape is no exception.

The LED light source and electronics have been specifically designed to promote a long lifespan with low energy consumption, ideal in these energy conscious times.

By choosing Serenga LED, customers benefit from significantly lower power consumption than traditional fluorescents, with a maintenance-free lamp, and battery life expectancy in excess of 5 years.

Integrated self-testing as standard

Manual testing of emergency lighting can be highly disruptive to everyday business - so why choose a system which requires it?

Serenga Escape makes emergency lighting testing easy.

Automatic Self-Test is included as standard, with the electronics, LEDs and battery operation (self-contained) continuously monitored.

Enhanced, addressable test versions are also available for larger installations, to better manage the ongoing testing requirement in these premises.

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

Serenga Sun-Lite LED: performance, power & precision

Serenga Sun-Lite offer a tremendous opportunity to everyone looking to add LED based emergency lighting to the design scheme.

LED light sources provide considerable value through minimal maintenance, long life and low operating cost, promoting significant cost and energy savings versus converted downlighters or 8 Watt fluorescents.

Complementing fully our Serenga Escape exit signs, Serenga Sun-Lite provide emergency lighting coverage across escape routes and open areas, as well as object-specific spotlighting. Engineered with specific diffusers or reflector arrangements, optimum light dispersal is achieved for every application.

Both fully recessed and low-profile surface mounted units are available, making Serenga the comprehensive solution for delivering high output, low energy emergency lighting across the entire design scheme.

Advantages at every step:

- High power, high efficiency LED light sources
- LED long life expectancy up to 12 years
- Optimised light distribution
- 5 Lux spotlight capability
- Minimal intrusion into building design
- Modular, first-fix installation
- Low energy night & security lighting
- Intelligent Self-Test functionality included
- Dimmable option available
- Excellent alternative to converted downlighters and 8 Watt fluorescents

Serenga light distribution

	Elongated light dispersal for:	Wide beam light dispersal for:	Spotlighting for:
	● Escape route corridors, passageways etc	● Open areas such as offices, reception areas, canteens etc	● First aid points ● Fire fighting equipment ● Fire call points ● Low location lighting

Horizon

- *Powerful, high output exit sign and emergency luminaire range delivering harmony across the entire design scheme*
- *Industry-leading luminaire spacing provides clear economy over and above traditional 8 Watt fluorescents*
- *New LED based exit signs for cost efficiency in maintained operations*

Modern in design, modular in construction

Horizon is a versatile, high performance emergency lighting solution designed to meet the demands of today's marketplace.

Horizon delivers tremendous advantages to all parties involved with emergency lighting, from initial project design through installation to ongoing ownership and maintenance.

Comprising directional signage and luminaires for open area and escape route lighting, Horizon offers a comprehensive, consistent solution for the entire emergency lighting scheme.

With Horizon, low energy LED based exit signs are matched with high output fluorescent luminaires to provide a cost efficient yet powerful emergency lighting system. This market-leading approach delivers optimal light distribution, so fewer luminaires are required, with low ongoing maintenance costs.

Both recessed and surface mounted units are available, for modern suspended ceilings and traditional solid walls, making the most of every location.

Straightforward, modular design ensures rapid installation, with the first-fix base fitted at an early construction phase, and the geartray, light diffuser or legend panel installed later as the building is finalised.

Modular design and construction offers specifiers and building owners opportunity to revise emergency escape route plans at later project stages, if required, as building use and occupants' needs become clearer.

Horizon - advantages at every step:

Whether you're designing, installing, maintaining or managing emergency lighting, Horizon has clear advantages over the competition, at every step in the process:

At planning:

- Modern styling & aesthetics make Horizon ideal for inclusion in high profile projects
- High versatility, with surface mounting, recessing or mounting via a range of accessories ensures Horizon comprehensively covers project needs
- Excellent light distribution and spacing promote a high level of efficiency when locating luminaires
- Designed to meet BS EN standards for assured performance

During installation:

- Modular construction with separate replaceable geartray for simple, secure installation
- 3 Year product warranty for confidence and added peace of mind

In the managed phase:

- LED based ceiling & back mount exit signs for energy conservation in maintained operations
- Use maintained LED based signs as low cost security lighting

On renewal:

- Modular design for rapid replacement of parts
- Retrofit existing fluorescent Horizon exit signs with LED geartray for reduced energy demand and longer lamp-life

Horizon luminaires have been specifically engineered with enhanced light optics to deliver market-leading spacing compared to standard fluorescents of similar lamp size.

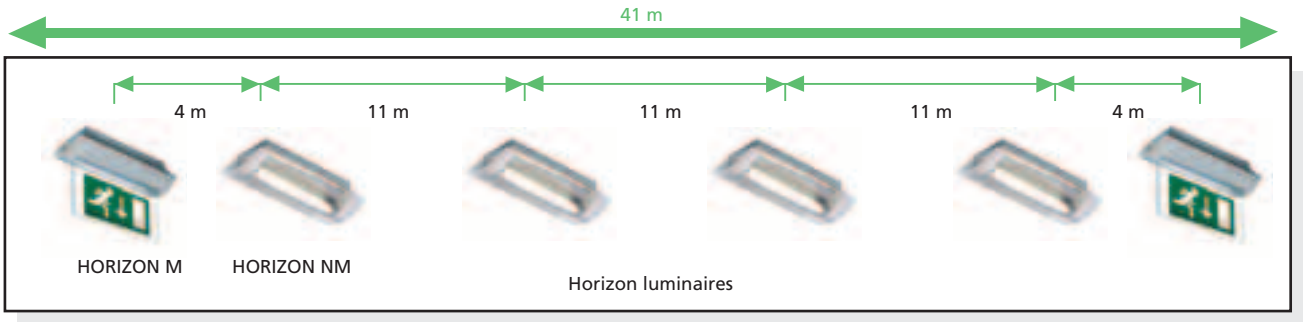
Through developing luminaires with increased spacing, Emergi-Lite is able to deliver key cost benefits for both installation and ongoing maintenance of emergency lighting, since fewer units are required in the system.

With emergency lighting a long term investment, it is clear that total cost of ownership, including installation, maintenance, battery replacement etc becomes a more important factor than the initial expense on luminaires.

Horizon's impressive spacing, and low maintenance LED exit signs, maximise the potential cost benefits to the user, thereby significantly reducing total cost of ownership.

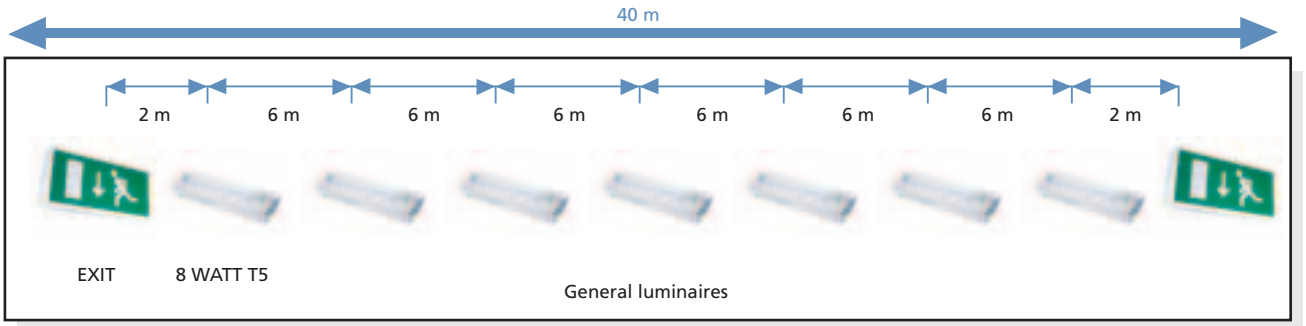
The following chart highlights the savings achieved by specifying and installing Horizon versus a standard 8 Watt fluorescent luminaire solution.

Horizon vs. 8 Watt Fluorescent cost comparison



Equipment: £632.00	Installation: £300.00	Energy: £508.00	Maintenance: £1296.00

Total cost of ownership (12 years): **£2736.00**



Equipment: £397.00	Installation: £450.00	Energy: £635.00	Maintenance: £1863.00

Total cost of ownership (12 years): **£3345.00**

Individual cost items may vary over time and the example is for guidance only. For specific project cost comparisons please contact Emergi-Lite sales department.

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

Aqualux

Aqualux

- *Hard wearing, high output luminaire and exit sign range for both interior and exterior use*
- *Impressive light output even at high ceiling heights*
- *Ideal for warehouses, storage facilities, and other general projects requiring heavy duty emergency lighting*

High performance, high output emergency lighting, for heavy duty use

Durability and high performance mark the Aqualux range of exit signs and luminaires.

Rated to IK10, and certified to both IP65 and IP67, Aqualux is the ideal choice where heavy duty emergency lighting is required, and excels in high bay warehouses, storage facilities, car parks, sports halls and stadia etc.

Being both impact and weather resistant, Aqualux is also well suited to use in schools, hospitals, shopping malls and other commercial environments requiring a robust emergency lighting solution.

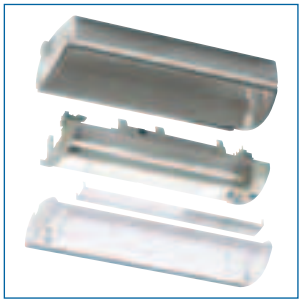
Aqualux offers a complete and comprehensive solution with low energy LED based exit signs complemented by high output luminaires.

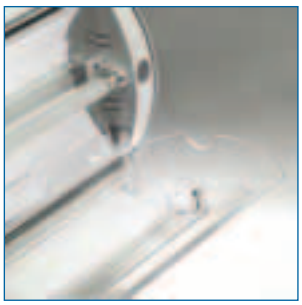
Two luminaire lamp options, 8 W T5 or high power 11 W PL, are available for excellent spacings even at high ceiling heights, not only beating conventional fluorescents, but also outcompeting twin spot tungsten halogen units.

All units combine with a range of mounting accessories, to ensure all location requirements are covered. IP65 rating ensures exterior emergency lighting can also be provided.

Additionally, specialist luminaire types are available, including a 'light sensor', and low temperature 'Freez-Lite' option. By using a light sensor, luminaires automatically illuminate at dusk, enabling Aqualux to operate as security lighting.

Aqualux 'Freez-Lite' operates down to minus 25°C, ideal for cold-stores, specialist winter sports venues and for general all-weather outdoor security lighting.





Aqualux - advantages at every step:

For designers, specifiers, installers and building owner/occupiers, Aqualux delivers more over the lifetime of the emergency lighting system:

At planning:

- High versatility, with range of mounting accessories for complete project coverage
- Specialist applications, such as security/night lighting and low temperature use make Aqualux viable for many diverse projects
- Excellent light distribution and spacing promote a high level of efficiency when locating luminaires
- Designed to meet BS EN standards and ENEC approved, for assured performance

During installation:

- Modular construction with separate replaceable geartray for straightforward, first-fix installation
- 3 Year product warranty for added peace of mind

In the managed phase:

- LED based exit signs for energy conservation in maintained operations
- Excellent luminaire spacing ensures fewer luminaires across the site, lowering maintenance and management costs
- Intelligent Self-Test included as standard

On renewal:

- Modular design for rapid replacement of parts
- Retrofit existing Aqualux fluorescent exit signs with LED geartray for reduced energy demand and longer lamp-life

Aqualux luminaires have been specifically designed to deliver exceptional light output and excellent spacings, even in areas with high ceilings, making Aqualux the sure choice for large scale open area emergency lighting projects.

Through developing luminaires with increased spacing, Emergi-Lite is able to deliver key cost benefits over the lifetime of the emergency lighting system.

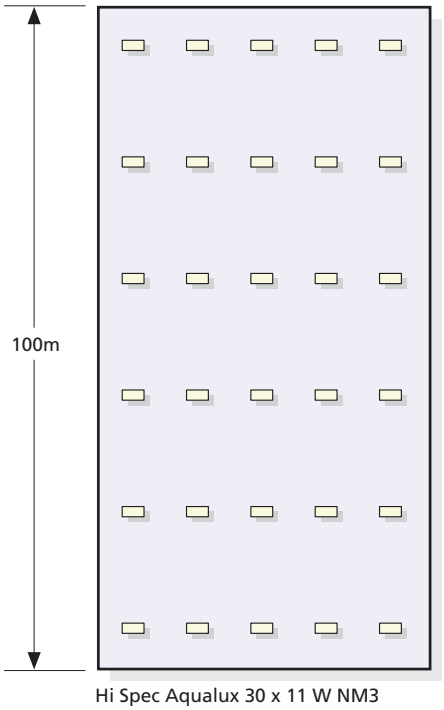
Fewer luminaires reduces installation, ongoing maintenance and servicing costs, along with the eventual recycling requirement.

With emergency lighting a long term investment, this market-leading approach can have a significant positive impact on total cost of ownership of the system.

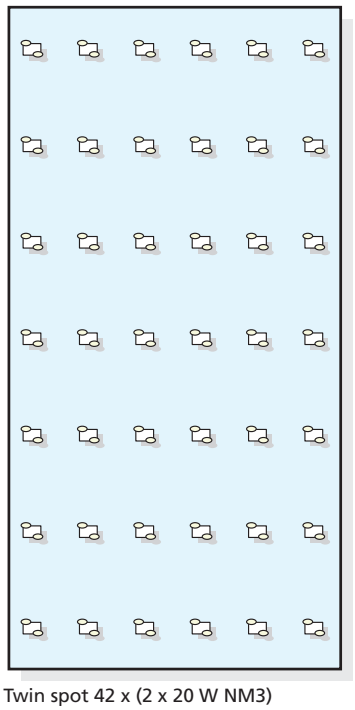
The following chart highlights the savings which can be achieved through specifying and installing Aqualux versus a twin spot tungsten halogen unit.

Aqualux vs. Twin Spot cost comparison

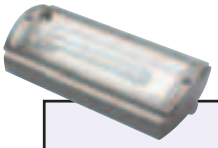
Comparison between Aqualux and Twin Spot unit, ceiling mounted at 6 m, to achieve open area requirement of 0.5 lux.



Hi Spec Aqualux 30 x 11 W NM3

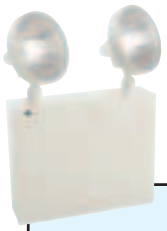


Twin spot 42 x (2 x 20 W NM3)



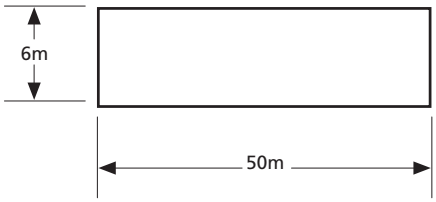
Hi spec Aqualux

Equipment cost: £5040
Installation cost: £1502
Total: £6542
£1.31 per m²



Twin Spot

Equipment cost: £7056
Installation cost: £2103
Total: £9159
£1.83 per m²



This shows a comparison between Aqualux high spec 11 W fluorescents and twin spot units arranged in a typical warehouse space. A complete open area scenario is used. For storage racks with aisles an alternative layout is needed.

Individual cost items may vary over time and the example is for guidance only. For specific project cost comparisons please contact Emergi-Lite sales department.

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

Hy-Lite: Style & Harmony

- *Range of aesthetically pleasing high wattage luminaires*
- *Designed to bring decorative appeal to a wide range of emergency lighting projects*
- *Providing the ideal complement to our high specification fluorescent and LED signs*

Hy-Lite: bringing a touch of style to emergency lighting

Hy-Lite is a range of high quality, high wattage luminaires suitable for both emergency and mains power operation.

These luminaires have been specifically selected to work alongside our exit sign range, to provide stylish and appealing escape route and open area lighting.

Hy-Lite luminaires are chosen for aesthetic appeal and their ability to deliver excellent illumination, across a number of environments.

The range extends from the highly decorative and slim-profile Camarque and Opera luminaires through to the more robust and heavy duty Cordona and Hawkeye variants.

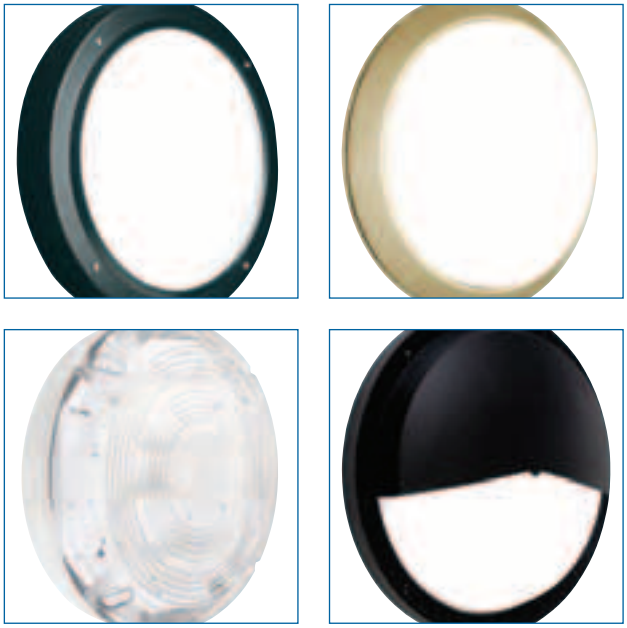
Each luminaire has individual characteristics to meet the needs of varying building requirements, from superior, soft illumination and downlighting to rugged, weatherproof general use.

Hy-Lite Camarque and Opera luminaires lead the way in providing stylish interior lighting, with optimised diffusers and a range of trim options.

Cordona and Hawkeye offer practicality and efficient power consumption, with robust polycarbonate or cast aluminium construction for heavy duty everyday use.

This versatility in design and function makes Hy-Lite suitable for widespread project application, including commercial, healthcare, municipal, industrial and entertainment venues.

With the various trim and mounting options available, and automatic testing variants to order, Hy-Lite is the clear choice for projects requiring high quality fluorescent escape route and open area emergency lighting.



Key benefits of Hy-Lite:

- Designed with aesthetics in mind
- Variety of luminaires, trim and mounting options for maximum versatility
- Decorative luminaires for indoor use
- Rugged, high impact IP55 and IP65 luminaires for general emergency lighting
- Efficient power consumption, with optimised light distribution
- Practical design and construction saves on installation time and cost
- Engineered for reliable maintained and mains use
- Combined high frequency ballast for maintained operations, promotes maximum energy efficiency
- Centrel, IR2 and Self-Test formats available

Aesthetically pleasing, robust luminaire.

- 28 Watt 2D standard or 38 Watt 2D high power luminaire
- Slim-line design for escape route and open area lighting
- Polycarbonate luminaire body with clear light optimised diffuser
- Hinged geartray for easy access
- Semi-recessing accessory available
- Night light option available soon to order
- Designed and manufactured to meet the requirements of BS EN 60598.2.22

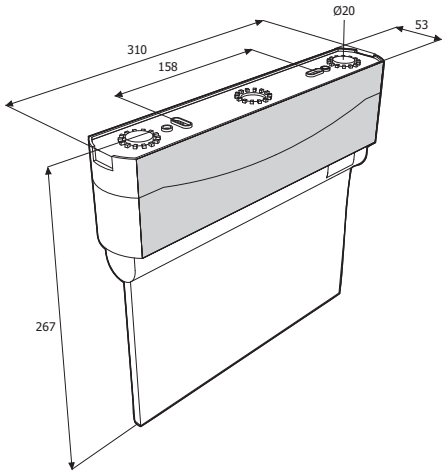
Legends are screen printed polycarbonate.

Dimensions



For accessory drawings, see pages 87 - 88.
For further information on Centrel emergency luminaire testing format, see pages 70 - 71 or contact Emergi-Lite.

Horizontal mounting EMH

An attachment is available which allows the luminaire to be mounted horizontally with the sign-plate hanging vertically. This kit consists of a reflector to redirect light to the sign-plate, an alternative sign-plate cover and screws to secure the sign-plate. Ideal for use above doors where space is limited.

Order Code	Description	Trim Colour
EMH-001	Horizontal	
EMH-002	Horizontal	
EMH-003	Horizontal	

Recessed mounting EMF

Comprising a recessing cage, trim plate and fasteners. The recessing cage has side wings that are used to secure the cage to the ceiling. The luminaire is installed by simply pressing it into place and replacing the cover.

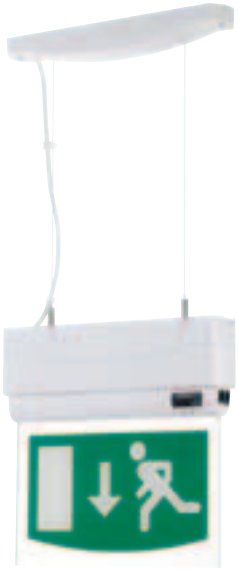
Order Code	Description	Trim Colour
EMF-001	Recessing kit	
EMF-002	Recessing kit	
EMF-003	Recessing kit	

Wall Brackets EMV

The bracket moulding features a ratchet detail allowing the sign to be angled at virtually any angle to the wall, including parallel and perpendicular mountings.

Order Code	Description	Trim Colour
EMV-001	Wall bracket	
EMV-002	Wall bracket	
EMV-003	Wall bracket	

Wire suspension EMS



The wire suspension kit includes an adjustment device and clutch mechanism through which the wire is pulled until the desired length is reached. Excess wire can then be cut away. The cut end does not enter the first-fix plate so cannot chafe wiring or compromise safety.

Variable wiring length makes this version suitable for angled mounting surfaces.

Order Code	Description	Trim Colour
EMS-001	Adjustable wire suspension kit	
EMS-002	Adjustable wire suspension kit	
EMS-003	Adjustable wire suspension kit	

Rod suspension EMR

Rod suspension kits are available for heights of 0.3, 0.5 and 1 metre.

Order Code	Description	Trim Colour
EMR300-001	0.30 m rod suspension kit	
EMR300-002	0.30 m rod suspension kit

- Ideal for indoor use in larger warehouses, factory spaces and industrial open areas
- Can be mounted upright on a wall or stanchion
- 55 Watt tungsten halogen lamps
- Mild steel enclosure
- Single lamp option available
- Optional time delay feature to support slow start mains luminaires
- Designed & manufactured to meet the requirements of BS EN 60598.2.22

Twin beam unit

Order Code	Input Voltage	Lamp Type	Power Consumption	Lamp Output*	Operation / Duration (hrs)	Recharge Period	Environment	Weight
HL551	230 - 240 Vac, 50 Hz	2 x 55 W TH	0.1 A	1800 lumens	NM1	24 hours	0 - 25 °C	7.8 kg
HL551PC	230 - 240 Vac, 50 Hz	2 x 55 W TH	0.1 A	1800 lumens	NM1	24 hours	0 - 25 °C	7.8 kg
HL1553	230 - 240 Vac, 50 Hz	1 x 55 W TH	0.1 A	900 lumens	NM3	24 hours	0 - 25 °C	7.8 kg

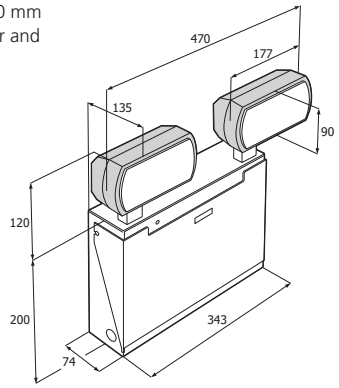
For AC/AC or AC/DC slave units please refer to our EMEX Central Power Supply Systems Catalogue. HL551PC includes polycarbonate lenses.
* Total lamp output for all lamps on unit.

Options

Order Code	Description
Suffix TD	Run on timer

Dimensions

Cable entry via 20 mm knockouts on rear and sides of unit.



Accessories

Order Code	Description
HLWG	Protective wire guard

For Range-Lite spacing data, please contact Emergi-Lite.
For accessory drawings, see page 88.
For further information on Centrel and IR2 emergency luminaire testing formats, see pages 70 - 73 or contact Emergi-Lite.

Twin beam emergency lighting.

- Rated for external use with battery and electronics enclosure sealed to IP65
- Remote mounting lamps with horizontal and vertical head adjustment
- Polycarbonate enclosure with screw locked front panel
- Glanding points on sides for cable gland fixing
- Meets the anti-glare requirement when projectors mounted at least 30° above the line of sight
- Optional time delay feature to support slow start mains luminaires
- Designed & manufactured to meet the requirements of BS EN 60598.2.22

Centrel IR2

Twin beam unit

Order Code	Input Voltage	Lamp Type	Power Consumption	Lamp Output*	Operation / Duration (hrs)	Recharge Period	Environment	Weight
HL203E3	230 - 240 Vac, 50 Hz	2 x 20 W TH	0.1 A	600 lumens	NM3	24 hours	0 - 25 °C	7.6 kg
HL551E3	230 - 240 Vac, 50 Hz	2 x 55 W TH	0.1 A	1800 lumens	NM1	24 hours	0 - 25 °C	7.6 kg

For AC/AC or AC/DC slave units please refer to our EMEX Central Power Supply Systems Catalogue.
* Total lamp output for all lamps on unit.

Options

Order Code	Description

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

High specification road tunnel safety luminaire.

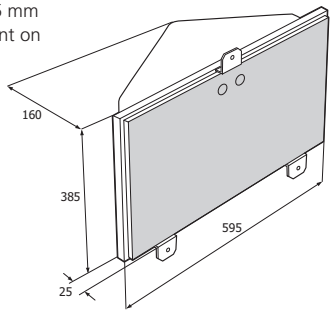
- Designed to cope with the most demanding environments - tunnels, industrial complexes etc
- Ideal where substantial directional sign viewing distances are required
- Angulated style for improved passageway visibility
- Cold cathode energy saving lamp with 40% energy saving over comparable fluorescents
- Stainless steel body, opal polycarbonate diffuser
- Legend to suit user requirement

Exit sign

Order Code	Input Voltage	Lamp Type	Power Consumption	Operation / Duration (hrs)	Recharge Period	Environment	Weight
ETUNM3-005	230 - 240 Vac, 50 Hz	CCFL	0.04 A	NM3	24 hours	0 - 25 °C	7.2 kg

Dimensions

Cable entry via 25 mm glanded entry point on rear of unit.



Legends

For specific projects, legend information will differ dependent on location and particular requirements. To specify this product please contact Emergi-Lite Technical Sales department.

Emergi-Lite, Bruntcliffe Lane, Morley, Leeds, LS27 9LL • Tel: +44 (0)113 281 0600 • Web: www.emergi-lite.co.uk

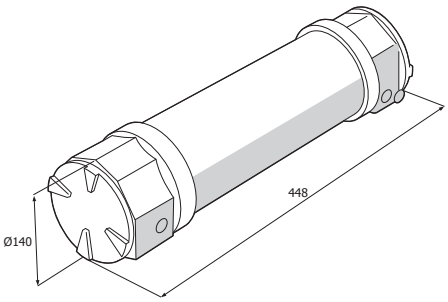
Explosion proof luminaire.

- IP66 to IEC529 rated - explosion proof and waterproof
- Suitable for Zone 1 and Zone 2
- 2 x M20 - ISO (1 plugged) cable entry
- Corrosion resistant light alloy body and end cap with a polycarbonate overtube
- 4 wire and earth terminals with loop facility (max. cable size 4mm²)
- Certification Code: EEx d IIC T6; Certification Standard: EN50014-018; Certifying Authority: SIRA, ATEX

Luminaire

Order Code	Input Voltage	Lamp Type	Lamp Output	Operation / Duration (hrs)	Recharge Period	Environment	Weight
XP2312	230 - 240 Vac, 50 Hz	8 W T5	100 lumens	NM3	24 hours	0 - 40 °C	5.5 kg
XP4322	230 - 240 Vac, 50 Hz	8 W T5	100 lumens	CNM3	24 hours	0 - 40 °C	5.5 kg

Dimensions



EEx d IIC T6 flameproof luminaire, to Gas Group IIC (hydrogen), capable of withstanding a maximum temperature of 85°C

Information summary for guidance only

For detailed information on hazardous area requirements please consult the British Standard code, BS 5345.

Code of Practice

BS 5345, the UK Standard for hazardous area equipment, installation and maintenance gives guidance relating to:

1 > **The degree of protection suitable for the hazardous zone**

2 > **The gas groups of any gases or vapours**

3 > **The temperature classification of the gases or vapours**

For further information on this product, and a fuller range of explosion proof luminaires, contact Emergi-Lite.

Zone Classification

Zone 0 > An explosive gas-air mixture exists continuously, or for long periods.

Zone 1 > An explosive gas-air mixture is likely in normal circumstances.

Zone 2 > An explosive gas-air mixture is not likely to occur in normal operation and then only for a short time.

Emergi-Lite, Bruntcliffe Lane, Morley, Leeds, LS27 9LL • Tel: +44 (0)113 281 0600 • Web: www.emergi-lite.co.uk

Portable emergency luminaire.

- High brightness, high power, focused beam LED light source
- Ideal for installers, maintenance or security personnel
- Durable polycarbonate body with clear polycarbonate diffuser
- Half power illumination (45 lumens for 3 hours) or full power (100 lumens for 1 hour)
- Carrying handle with variable ratchet positioning
- Designed & manufactured to meet the requirements of BS EN 60598.2.22

Luminaire

Order Code	Input Voltage	Lamp Type	Lamp Output	Operation / Duration (hrs)	Recharge Period	Environment	Weight
PWL113E	230 - 240 Vac, 50 Hz	LED	100 / 45 lumens	NM1 / NM3	24 hours	0 - 25 °C	0.7 kg

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

Testing Solutions

- *Comprehensive range of emergency lighting testing solutions for all sizes of project*
- *Removing the disruption that manual luminaire testing brings to the busy, modern business environment*
- *All testing solutions compliant to IEC 62034*

Centrel addressable emergency lighting testing system

Fire safety regulations require periodic testing and maintenance checks of emergency lighting systems to ensure these systems remain effective and fully operational.

Owner/occupiers have responsibility for this testing requirement and ensuring documentation is retained for review. Naturally, such requirements carry with them cost implications, and the ongoing need to schedule and manage a regime of maintenance.

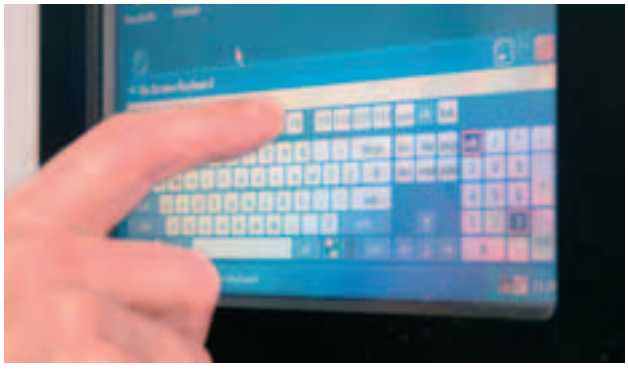
The Centrel addressable testing system has been devised to provide the comprehensive solution to luminaire testing. Centrel dramatically reduces the expense and burden of manual testing, maintenance and fault checking.

Centrel enables the user to run manual or automatic scheduled tests on the emergency lighting system, and to record all test information electronically in a 'log book', for future reference.

Control and monitoring is managed through an interface unit which is connected between the PC and the emergency luminaires. Each luminaire is programmed with an electronic serial number or address which is used by the interface unit for interrogation and fault diagnosis.

Faults in the emergency lighting system are thereby automatically diagnosed, with location and fault detail recorded in the log book. Specific repairs can then be scheduled, with the maintenance engineer fully aware of the type and location of the fault to repair.

Centrel also helps reduce maintenance costs through improved test schedules, enabling forward planning of maintenance, thereby giving surety of correct system operation when the emergency lighting is needed.



The Full Service

Aimed at medium to large scale installations, Centrel is fully supported through our sales and technical support teams:

System design and estimate preparation

The correct products and design to ensure best value when protecting your buildings and personnel.

Project planning and installation

Practical advice to electrical contractors on matters such as cable structure, system installation and set-up etc.

Commissioning and maintenance

Experienced, fully qualified, field service engineers available to commission and maintain the system.

For added peace of mind, maintenance contracts can be put in place.

Project after-sales service

Project files are retained by our service department.

If additional fittings are required it is a simple task to prepare a luminaire with the next sequential number, soak test in house and despatch for addition to the system.

Technical literature & advice

Please contact a member of our sales team for full details and advice on Centrel, including:

Technical design guide

Providing more in-depth technical information.

System demonstrations

Demonstrations arranged at your own premises or at our head office.

Centrel

A wide range of Centrel compatible luminaires is available - look out for the Centrel logo in this catalogue.

Emergi-Lite, Bruntcliffe Lane, Morley, Leeds, LS27 9LL • Tel: +44 (0)113 281 0600 • Web: www.emergi-lite.co.uk

When do you need to test?

European Standards BS 5266-8 (EN 50172)

Simplified Testing Regime

- Daily check central power supply indicators for healthy operation
- Monthly functional check
- Yearly duration check
- Always keep documented records
- Automatic test devices should meet IEC 62034

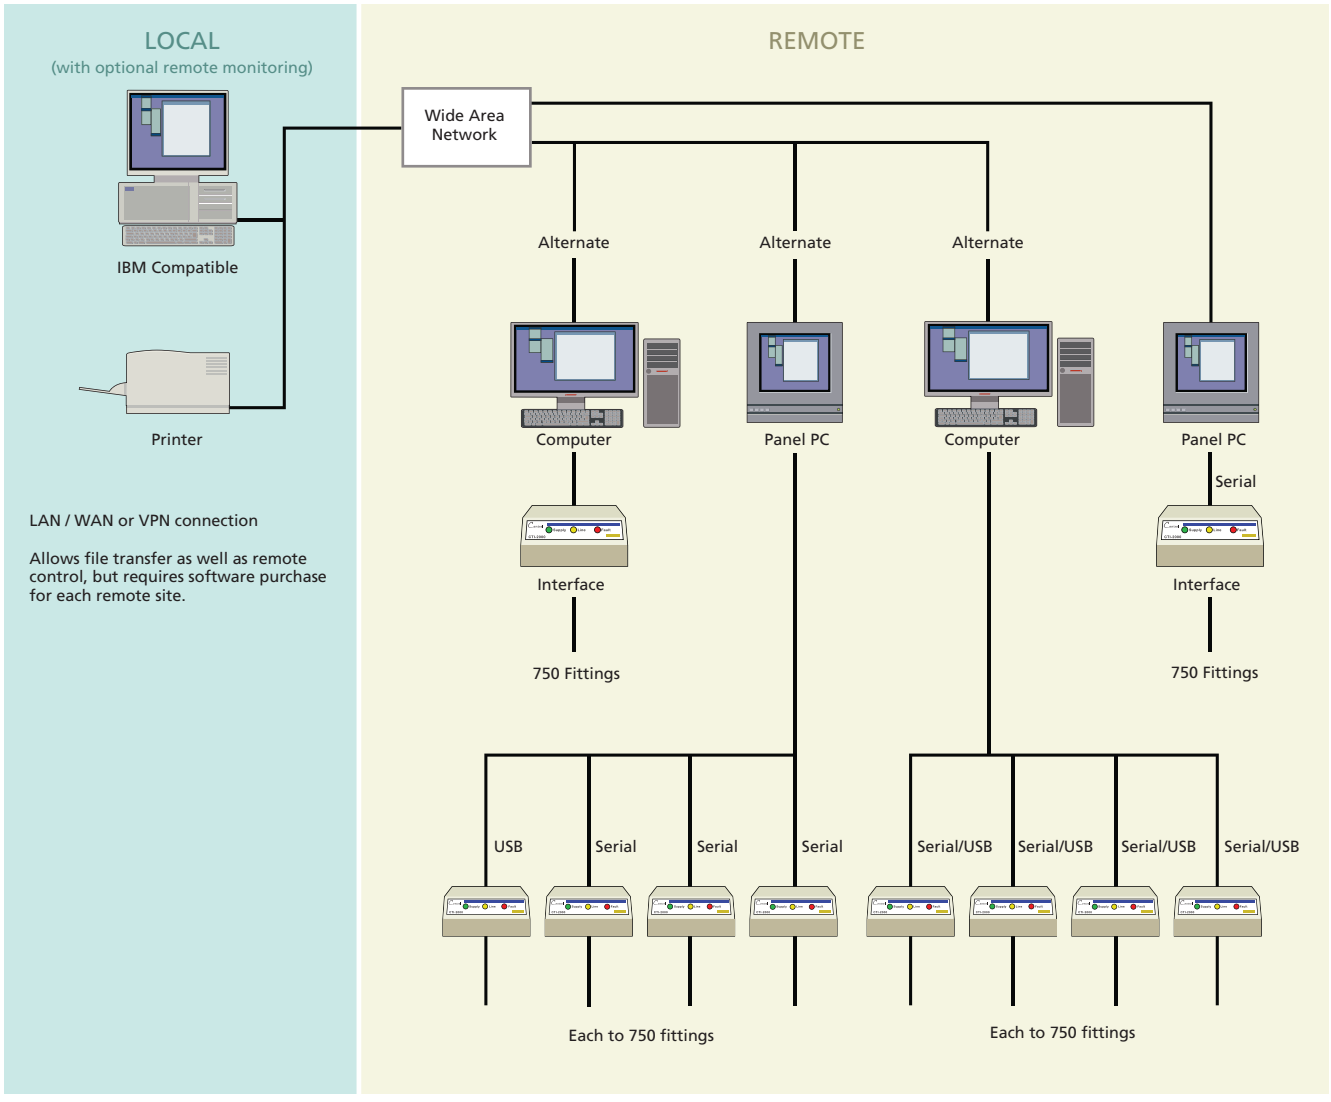
What needs to be checked & tested?

- Mains present and healthy
- Battery present
- Battery charging
- Inverter circuit in emergency operation
- Lamp functions and in circuit
- Duration

Effective testing through Centrel

- Tests are run either manually or automatically under control of the user's PC or panel
- Manual tests can be performed at any time from the main Windows test screen
- Unattended tests can be performed using the schedule program so long as the computer remains switched on
- All automatic test schedules can be easily programmed for the type of test required and for the time the test is to be performed
- All results of tests are stored in the 'Log book' for recall at a later date
- Each luminaire is programmed with an address which is used by the interface unit for interrogation and fault diagnosis

The schematic below highlights the scalability of Centrel and its particular importance in large scale emergency lighting installations. For further information, please contact Emergi-Lite.



Advanced infra-red emergency lighting testing system

IR2 is a safe, fast and easy way to test emergency lighting, offering the user a simple walk test process to interact with the emergency lighting system.

IR2 offers unprecedented flexibility including:

- Choice of automatic or manual testing
- Upload and download capability
- Simple Self-Test as standard
- Handheld interaction with luminaires so no need for ladders or keyswitches
- Luminaire status information indicated by green/amber LED
- Choice of a simple 'test-only' transmitter (IR2-TX) or intelligent bi-directional handset (IR2-TESTWARE™)
- Data management via PC

Testing can be done using the IR2-TX, 'test-only' transmitter, or the intelligent bi-directional handset (IR2-TESTWARE™ package), which tests, interrogates and reports. IR2-TESTWARE™ allows the user to view the results on small screen, or, as desired to download them to a PC to produce automated reports.

Key benefits and features

- **Easy to operate:** users become familiar with the control device in a very short amount of time - indicator interpretation is straightforward
- **Effective testing:** luminaire status is clearly given. The user will be able to fault find and plan maintenance efficiently
- **No extra wiring:** Eliminates the need for key switches
- **Zero impact:** the fabric of the building remains unaffected (no additional wiring, no building works and no need for redecoration)
- **Promotion of safety awareness:** users find the test method interesting and interactive
- **Cost and time savings:** reduced installation effort with less wiring and lower maintenance times allied with the ability to plan maintenance schedules better
- **Regulation compliance:** BS & EN standards requirements for testing emergency lighting luminaires are met by using the IR2 system
- **Compatibility with existing schemes:** new product developments are backwards compatible with the original Flashpoint IR system
- **Proven reliability:** IR2 has been proven in the field for many years. Recent hardware and software updates have maintained technical advancements

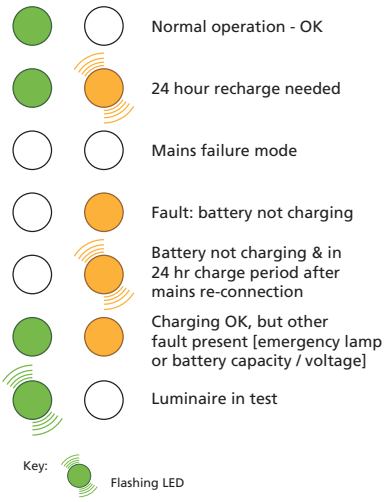
Emergi-Lite, Bruntcliffe Lane, Morley, Leeds, LS27 9LL • Tel: +44 (0)113 281 0600 • Web: www.emergi-lite.co.uk

Optional Self-Test operation

- Self-Test is an option, which is pre-set in the factory and can be programmed from the bi-directional IR2-TESTWARE™ handset
- If a test is not performed in 12 months an automatic duration Self-Test will take place. The 'Self-Test' interval can be programmed between 2 and 365 days (factory pre-set to 12 months)
- Self-Test can be inhibited
- Internal timing in the luminaire is synchronised with the mains frequency for accurate control
- LED indicators on the fitting identify faults locally. A Self-Test status report can be downloaded to the bi-directional handset

LED indication

Each luminaire has a transmitter/ receiver module fitted with green and amber LED indicators. The LED lit colours give the luminaire status.



IR2-TESTWARE™

Bi-directional handset comprising handset, PCLINK software and USB interconnect cable.

- For testing, interrogating and reporting the condition of IR2 fitted luminaires
- OLED (organic LED) screen
- 4 button menu system with large control buttons
- Software is flash upgradeable, and backwards compatible with Flashpoint IR (IR1) systems
- Optional password entry protection
- The unit gives instant status report of all emergency luminaires in detail
- Onboard memory with storage capacity for 2000 records
- Download information into a spreadsheet format for automated record keeping and assessment
- USB socket, USB interconnect cable provided for PC link
- Allows maintained to non-maintained switching

Order Code	Description
IR2-TESTWARE™	Intelligent control package; hand-held luminaire interrogator/tester, PC-LINK software, USB cable and instructions

IR2-TX

Initiates test sequence (tests for a 3 hour duration and automatically resets back to the normal condition).

- Status notified by green and yellow LED indicators on the luminaire
- Reset the luminaire to normal operation (to test for brief operation)
- Backwards compatible to Flashpoint IR (IR1)

Order Code	Description
IR2-TX	IR2 test transmitter

Comprehensive product range

A full range of exit signs and luminaires are available with IR2. Look for the IR2 symbol on individual product pages.

Self-Test emergency lighting testing system

Current regulations stipulate periodic mandatory testing of an emergency lighting system to ensure the correct operation of the system in the event of a mains failure, together with compilation of all corresponding documentation.

The Regulatory Reform (Fire Safety) Order 2005 and Fire (Scotland) Act 2005 place responsibility for the testing of emergency lighting systems firmly with the owner or occupier of the building.

Manual testing and the compilation of records can prove expensive, time-consuming, and disruptive to commercial activities.

Emergi-Lite Self-Test offers an easy and cost effective solution for regular testing of emergency lighting, without requiring programming or complex set-up procedures.

It provides continuous monitoring of the mains and battery status, together with a regular testing regime designed to meet mandatory requirements.

Key features of Self-Test

- Simple and dependable automatic testing
- Easy installation
- Tests the battery, charger and lamp
- Each luminaire works independently in the event of an emergency
- Available in a variety of luminaire types
- Visual fault identification
- Runs tests in background mode
- Ability to stagger luminaire testing

Automatic compliance to prescribed intervals

An Emergi-Lite Self-Test automatically runs a commissioning routine when the mains is switched on initially. An onboard clock/calendar microprocessor ensures the appropriate tests are carried out at the allocated time-period. Test functions include continuous monitoring, monthly, annual and staggered periodic testing plus a push-button test.

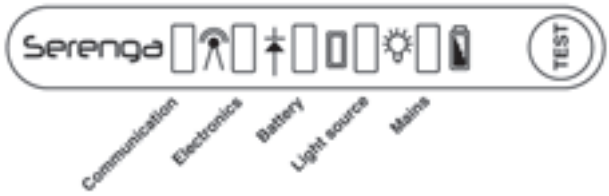
Comprehensive product range

A full range of exit signs and luminaires are available with Self-Test. Look for the Self-Test symbol on individual product pages.

Note: Serenga, Aqualux ranges and Horizon LED exit signs include in-built intelligent self-testing within standard units.

Product example - Serenga Escape

The illustration below highlights the intelligent Self-Test testing facility built into the base of the smart-frame of all Serenga Escape exit signs.



Test operation

Green LED indicates normal operation.

Amber LED indicates a fault.

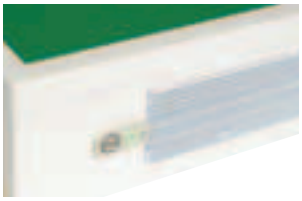
Our Serenga/Aqualux ranges and our Horizon LED exit signs are supplied with in-built self-testing feature.

Product example - Navigator Compact

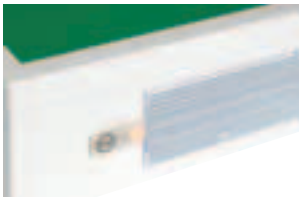
Our standard product range is available with Self-Test as an option. Contact Emergi-Lite for further details and specific product codes.

Green and amber LEDs indicate luminaire status, as below:

Test operation



Green LED indicates normal operation.



Amber LED indicates a fault.

Emergi-Lite, Bruntcliffe Lane, Morley, Leeds, LS27 9LL • Tel: +44 (0)113 281 0600 • Web: www.emergi-lite.co.uk

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

Reference and Design

- ***Specific guidance on emergency lighting types and application, in line with BS EN 60598.2.22 and BS 5266 / EN 1838***
- ***Key reference point for dimension drawings and essential spacing data for our luminaire and exit sign range***

The requirement for emergency lighting originates from the Fire Precautions Act 1971 and is further enforced by the Fire Precautions (Workplace) Regulations 1997 (Amended 1999).

The Regulatory Reform (Fire Safety) Order, FSO came into force in October 2006 and now replaces all previous fire safety legislation.

The key considerations from the Fire Safety Order are:

- The FSO creates one simple fire safety legislative control for all workplaces/non-domestic premises
- Control is fire risk assessment based, with the responsibility for fire safety resting with the 'responsible person' for the premises
- All persons inside the building/in the vicinity who might be affected by a fire must be protected
- Employees will be required to act upon the fire risk assessment, make remedial arrangements accordingly and maintain the fire precautions
- Failure to comply with the rules would be a breach of law, with the consequence of enforcement or prohibition notices being served

The fire safety risk assessment is a legal requirement, and where a site has 5 or more employees the risk assessment must be documented.

Fire certificates under the Fire Precautions Act 1971 are now no longer valid. Guidance documents on the new Fire Safety legislation have been published and the appropriate ones must be consulted as part of the overall fire risk assessment.

Other important legislation and regulations, such as The Buildings Regulations and The Health and Safety "Safety Signs and Signals" Regulations 1996, also have a requirement for emergency lighting and must be considered as part of the design and specification.

A number of standards have been devised to provide guidance on application of emergency lighting in line with legislative requirements, and to determine the quality of product to be specified.

The major standards to be considered when designing a high-level emergency lighting system are:

- **BS 5266-1, -7, -8 and -10**
  This standard sets the guidelines for installation of emergency lighting, as to the location and frequency of emergency luminaires and exit signs, and the minimum lighting levels required
- **BS EN 60598.2.22**
  This is the product standard which establishes the performance requirements of emergency lighting luminaires and internally illuminated exit signs
- **IEC 62034**
  This standard defines the requirement for automated testing systems for emergency lighting
- **ICEL1001, ICEL1004 & ICEL1009**
  Standards provided by the Industry Committee for Emergency Lighting which define enhanced performance requirements for the differing types of emergency lighting, backed by independent testing

General requirements for emergency lighting (BS 5266-1, -7, -8 and -10)

If emergency lighting is required it should:

- Indicate the escape routes clearly with exit signs so there is no doubt which is the way out
- Ensure fire safety equipment such as fire alarm call-points, fire extinguishers etc can be located
- Illuminate escape routes, and open areas used in escape routes so that obstacles can be avoided
- Provide illumination for high risk task areas to allow the processes to be shut down safely

Any point on an escape route or leading to it must have an exit sign so that direction of travel is never in doubt. Exit sign boards can be used, providing that an adjacent emergency luminaire illuminates the board adequately. A more effective way of emphasising the way out would be to use internally illuminated exit signs, such as our Serenga, Horizon, and Aqualux ranges, as these offer twice the viewing distance of exit sign boards *(see right)*.

Points of emphasis

Mandatory points of emphasis have been established where directional signage or specific illumination is required. These are:

1. Near an exit door
2. Near changes of direction
3. Near stairs and changes of level
4. Near the intersection of a corridor
5. Near each piece of fire-fighting equipment or manual call point
6. Near each First Aid point

Exit signs

Designated legend formats

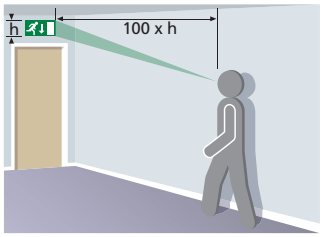
European pictogram format signs are acceptable.

ISO 3864 compliant signs are also deemed acceptable.

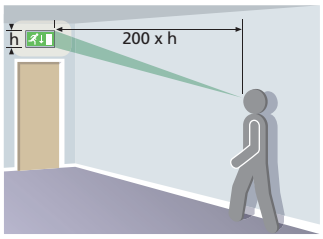
Text only signs are no longer acceptable and should have been withdrawn.

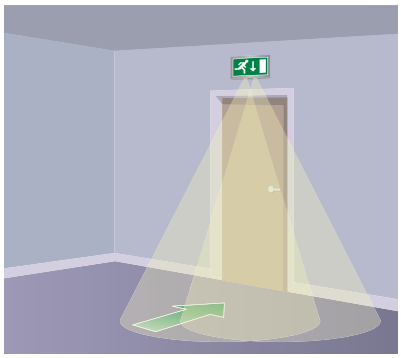
Maximum viewing distances

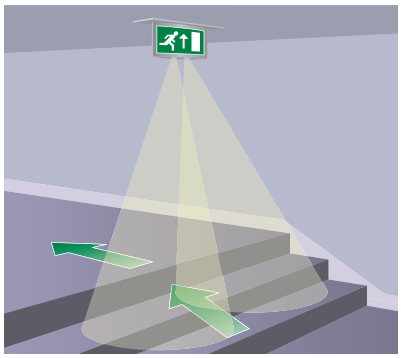
Exit sign boards have a maximum viewing distance defined as 100 x the height of the sign (h), in metres.

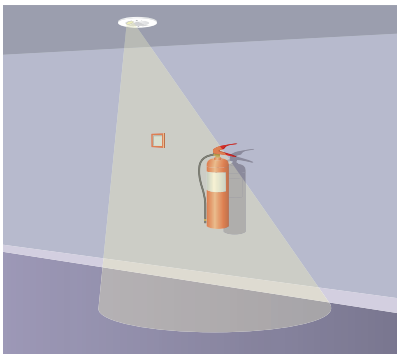


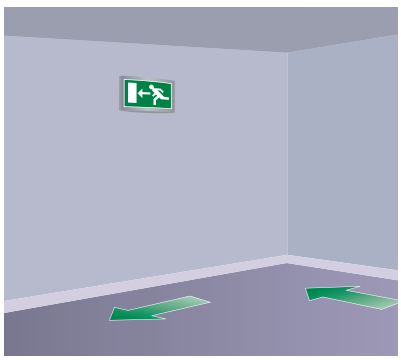
For illuminated exit signs, the maximum viewing distance is defined as 200 x the height of the sign (h), in metres.

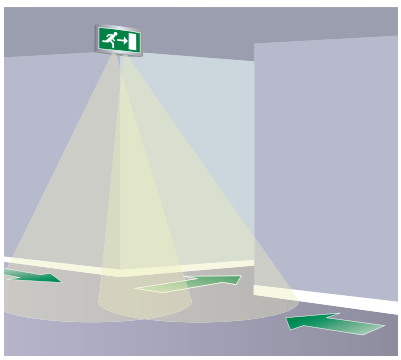


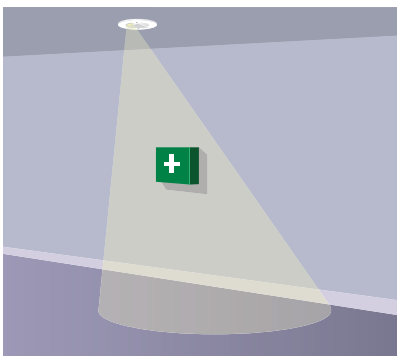












In addition to these points of emphasis, the following need to be considered when planning emergency lighting.

Escape routes

A defined escape route of 2 m width must be illuminated to a minimum of 1 lux along the centre line *(see right)*.

Open areas (anti panic)

Open areas must be illuminated to 0.5 lux minimum in the core area *(see below right)*. This also applies to areas with undefined escape routes, in halls or areas greater than 60 m².

High risk task areas

This refers to areas normally associated with moving machinery, dangerous materials or processes, and other areas of high risk where hazards may continue after mains lighting failure. Illuminance levels should be maintained at 10% (or over) of the normal lighting level or 15 lux, provided within 0.5 seconds, to allow for safe egress and/or termination of processes. For high risk task areas, the lux requirement is calculated at the plane of the task rather than floor level.

Additional areas

Additional areas not part of the escape route still require illumination as people may be located there and/or measures may be required to ensure the safety of persons or processes. These areas include kitchens, first aid/operating rooms, lifts, refuge areas, escalators and moving walkways, toilets larger than 8 m² (or smaller without borrowed light), disabled toilets, small lobbies and pedestrian routes within covered car parks.

Luminaire mounting height

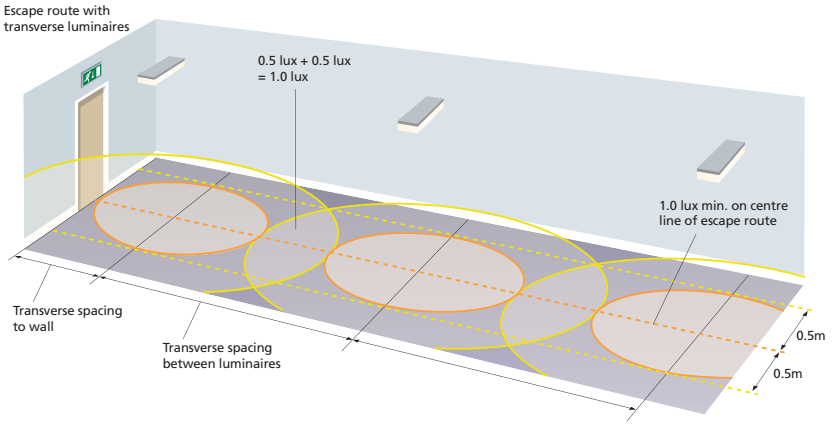
Emergency luminaires should be mounted at least 2 m above the floor. There is no upper limit but luminaires should be fitted below smoke level if there is a significant risk of floor illumination being affected.

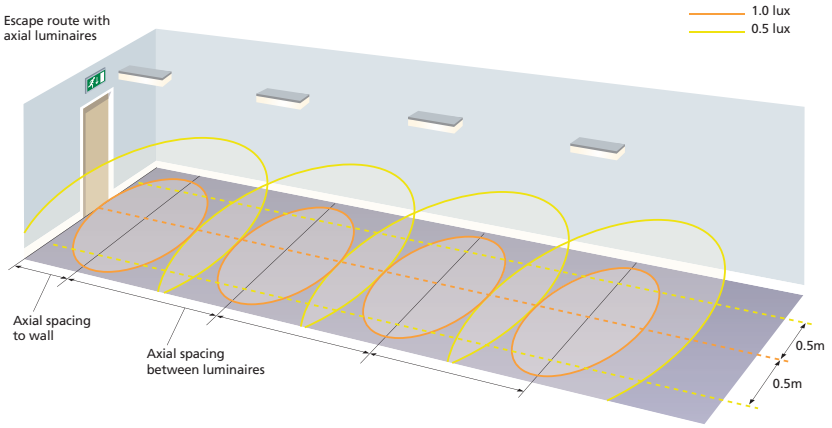
System integrity

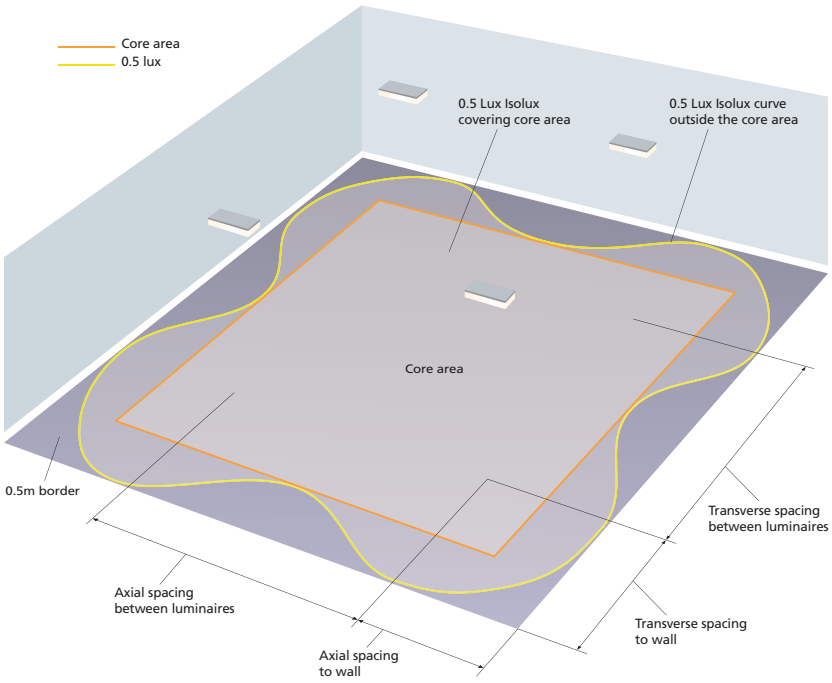
All compartments should include two or more emergency luminaires to counter the risk of emergency luminaire failure.

Stand-by Lighting

If stand-by lighting is used as emergency lighting it should conform to all the requirements of emergency lighting.







Specific location requirements (BS 5266-10)

BS 5266-10 stipulates light levels, response and duration times for specific locations within premises, and for specific activities, including:

- Kitchens
- First Aid rooms
- Examination and treatment rooms
- Refuge areas for the mobility impaired
- Plant rooms, switch rooms and emergency winding facilities for lifts
- Reception areas
- Crash bars or security devices at exit doors
- Inspection of the condition of fire control and indicating equipment

A table showing the illuminance recommendation for these specific locations and requirements can be found in BS 5266-10.

Emergency lighting systems

There is a varied range of emergency lighting available to suit different budgets, decors, building requirements, colours and specifications. The types and categories available for specification are:

Types of emergency lighting

- **Self-contained**
  Each luminaire contains a battery and electronic circuitry to charge batteries and operate the lamp.
- **Slave**
  Luminaires are powered from a central system.
- **Conversions**
  Almost any mains fluorescent luminaire can be converted for emergency use. Emergi-Lite is registered to ICEL 1004 to undertake emergency lighting conversions at our head office facility in Leeds.

Categories of emergency lighting

- **Non-maintained (NM)**
  Luminaires operate when the mains fail.
- **Maintained (M)**
  Luminaires operate when the mains fail, but can also be operated if required using a switch when the mains are healthy.
- **Combined Non-maintained (CNM)**
  The luminaire contains more than one lamp, one of which is mains operated, the other is for emergency use only. When the mains is healthy one or more lamps operate, but should the mains fail the emergency lamp operates.
- **Combined Maintained**
  Similar to combined non-maintained, but when the mains supply is healthy both lamps operate, whereas on mains failure only one lamp operates.

Emergency lighting luminaires must conform to the requirements set out in BS EN 60598.2.22.

Using products designed to this product standard and marked with the approval of the national test house gives the installer more confidence and less risk in the work he performs. However, CE marking alone does not necessarily imply a product will work in an emergency situation.

Certified and approved emergency lighting therefore has an enhanced level of safety compared to general lighting.

The Industry Committee for Emergency Lighting (ICEL) has a certification and registration scheme (ICEL 1001) for luminaires and conversion modules. This scheme goes further than the BS EN product standard, by introducing additional requirements for performance, battery life, component life and fire retardancy.

In using ICEL registered product, the competent person or installer can be further assured that the product is safe and is suitable for emergency use.

Testing and maintenance of emergency lighting

Fire legislation requires the safety systems within a building to be tested and maintained to ensure correct working order.

The major standards for emergency lighting establish the testing requirement, and that testing and maintenance should be done by a "competent person" (trained, with appropriate skills and experience).

Automated testing solutions are available to assist with the testing requirement, such as the Self-Test, IR2 infra-red and Centrel addressable testing solutions available from Emergi-Lite *(see pages 70 – 74 of this catalogue for more details on these solutions).*

For automated testing solutions, IEC 62034 provides specific guidance for luminaire testing, including:

- Testing should be undertaken during periods of low risk
- Tests should be performed at the appropriate times for the correct duration
- Testing should prove the emergency circuit operates correctly, and that the battery powers the luminaire for the duration of the test
- Results of the test should be reliably indicated

Within the IEC 62034 Standard, test systems for both self-contained and centrally powered emergency lighting systems are covered.

For further information about emergency lighting standards and legislation, or the testing requirement, contact Emergi-Lite direct or visit our website www.emergi-lite.co.uk for a copy of our latest technical guide *(see page 93 for more details).*

Checklist for emergency lighting system design

Point	Establish	Action
1	Establish position of fire equipment, position of hazards such as steps, changes of direction, stairs, first aid points etc.	Provide an emergency luminaire near (within 2 m horizontally) of each of these points of emphasis.
2	Establish designated exit doors, points on escape routes or open areas where a sign is required to make the exit obvious.	Provide exit signs with arrows if necessary, observing the maximum viewing distances of the exit sign type.
3	Establish the need for external escape lighting.	Provide emergency luminaires so that people can proceed outside to a place of safety.
4	Establish the escape routes and establish mounting heights of luminaires above the floor.	Position luminaires along parts of the escape route not already illuminated near the above points to provide 1 lux minimum along the centre line and 0.5 lux minimum in the 1 m central band. Use published data in the form of spacing tables for the luminaires to determine the positions taking into account the mounting height.
5	Establish the open areas used as escape routes and other open areas larger than 60 m^2 and establish mounting heights of luminaires above the floor.	Provide 0.5 lux minimum in the core area. Use published data (as above) to determine the positions.
6	Establish the position of lifts, escalators, toilets, control/plant rooms, pedestrian walkways in covered car parks.	Provide emergency luminaires in all of these areas.
7	Establish the location of any first aid point or fire equipment not on an escape route or open area.	Provide 5 lux emergency illuminance on the floor in the vicinity of the point. This also applies for a first aid room.
8	Establish the toilet areas.	Provide emergency lighting for toilets larger than 8 m^2, as if they were open areas. For toilets smaller than 8 m^2, unless illuminated by borrowed emergency light from another area, provide at least one emergency luminaire. Provide emergency lighting to all disabled toilets.
9	Establish any small lobbies with no borrowed light.	Provide emergency lighting.
10	Establish any central power supply (if used) is in an area of low risk away from other switchgear or plant.	Position the central power supply in its own room in fire-proof construction.
If the building use is known :		
11	Establish any need for stand-by lighting.	Provide generators as required. If the response time is longer than 5 seconds, then transitional, alternative or additional emergency lighting must be provided.
12	Establish any special needs for the occupants such as impaired mobility or impaired sight.	Provide additional emergency lighting to reduce the risk to those people to help them evacuate the premises.
13	Establish the location of any high risk task areas and the normal lighting illuminance (lux) in these areas.	Provide 10% of the normal illuminance (lux) or 15 lux minimum.
14	Establish if there are any dust or dirt problems.	Allow a service factor as appropriate. 0.8 is allowed for normal areas, but for dusty environments 0.5 may be required, or alternatively instigate a regular cleaning procedure.
15	Establish any local regulations.	Provide emergency lighting to comply with the regulations.
16	Establish if there is any dimmable lighting and shopping malls.	Provide maintained emergency lighting.
17	Establish whether people would be "unfamiliar" with the escape routes.	Provide maintained exit signs.
18	Establish the use of the premises: • entertainment (including temporary such as licensed evening dance at a school) • sleeping risk • residential special care • non-residential care • public access non-residential • industrial • multi-storey dwelling over 10 storeys	Recommended Minimum Duration: 3h 3h 3h 1h 1h 1h 3h
	Note : because the duration times are varied, it is customary in the UK to use 3h.	

Note: for points 5 and 6 the luminaires positioned near points of emphasis can be moved slightly within the 2 m horizontal tolerance to fit in with the spacing or array of emergency luminaires in the escape route or open area.

This checklist is for guidance purposes only and does not form an exhaustive list of all requirements to standards and legislation, which should be reviewed when undertaking emergency lighting system design.

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

Central power supplies

Our Central Power Supply Systems division offers a choice of reliable and high quality products which are designed to meet the relevant standards and specifications for both AC/AC and AC/DC applications. The 'EMEX Power' and 'EMEX TS' static inverters, 'EMEX 110' AC/DC and 'Compact Power' product ranges are manufactured in our Leeds facility, supported by an experienced engineering, sales, and commissioning team.

EMEX – AC/AC Static inverter range: 220/230 V 50/60Hz

Static inverters in this range are true passive stand-by emergency lighting units, designed and built to exceed current emergency lighting standards and technical requirements, something with which most UPS based central power products do not comply.

'EMEX Power' and 'EMEX TS' static inverters offer a low maintenance and extremely reliable central power supply solution with low running costs and a high degree of functionality to serve individual customer needs.

- Modular design, which makes maintenance or repair a simple task
- Manufactured in the UK
- Normal mains luminaires with electronic starters/high frequency ballasts may be driven by the system (glow wire starters cannot be used in accordance with BS EN 60598.2.22)
- Ideal for task lighting projects where normal (high) lighting levels are required to minimise business disruption
- High efficiency: Low running cost
  - This AC/AC type of system has been designed for an inherently long service life with associated significant cost benefits over alternative emergency lighting solutions
- Cost conservancy and design
  - Ventilation fan life is maximised, as they will only operate when required, during 'battery charge' or 'inverter active' cycles
  - Battery life conserved by a temperature compensated constant voltage charger circuit in conjunction with passive stand-by inverter operation
- Functional features include sub-circuit monitoring, final exit input, MCB monitoring, M/NM operation (user selectable), fire alarm input and two volt-free common alarm outputs
- MCB protection devices are used throughout the equipment, eliminating the need for fuse spares
- Digital display for battery and output metering V & I
- Fully compliant with EN 50171 and ICEL1009
- EMEX TS includes integral touch-screen with EMEX Test capability

EMEX110 – AC/DC Central Power Supply Systems: 110 V

The 'EMEX110' range is available where the user preference is for an AC/DC system powering slave luminaires fitted with compatible inverter modules. The 110 V range is suitable for medium to large premises, including schools, supermarkets and other commercial or local authority properties.

Structurally, the type enjoys the modular design and all the standard features of the EMEX range. A data line testing option is also available.

Emergi-Lite CPS systems are now kitemark approved to EN 50171.

Emergi-Lite, Bruntcliffe Lane, Morley, Leeds, LS27 9LL • Tel: +44 (0)113 281 0600 • Web: www.emergi-lite.co.uk

EMEX Test

An optional innovative test facility is available for testing both the central power supply system and emergency lighting luminaires linked to it. The 'EMEX Test' hardware and software has been developed to produce an advanced, reliable and functional system at comparatively low cost.

Data communication to the luminaires being fed from the inverter is available in two forms depending on user choice. Either a Data Bus version utilising a single pair data cable or a line borne data signal imposed onto distributed AC power is available.

- Both the central power supply and luminaires are addressable
- Programmable: To perform timed tests during 'out of hours' periods for minimal disruption to everyday core business
- Any failure is recorded to a printable log file
- User interface: A standard PC with printer or door mounted touch-screen
- Networking facility: Up to 256 separate systems can be networked for testing from a single PC
- Remote access: Test results can be viewed remotely via computer network/internet
- A substation (MXC) is used to control up to 40 luminaires
- Additionally, any standard luminaire can be converted for use with substations using a small LTC interface module (LTC technology is patented)

Compact power AC/DC Central Power Supply Systems

Light and medium duty 24 V or 50 V for smaller premises or replacement work.

Full range of options available to suit site and customer requirements.

For a project assessment, design and quotation please contact a member of our internal Technical Sales or Field Sales Team. We will be able to offer the most suitable equipment for your local requirement.

Life safety in the community

Many locations within the public and private sector provide essential support to the less able, whether as an educational, healthcare, or community care facility.

These types of premises may require additional life safety solutions, over and above the requirements for emergency lighting or fire detection.

Emergi-Lite has developed a range of solutions to support this enhanced safety requirement in hospitals, care homes, HMOs and schools etc, including our Help-Lite emergency lighting and alarm system.

Help-Lite

Help-Lite comprises a luminaire with 'HELP' legend panel and remote alarm connected to an emergency pull cord and distress switch which enables the less able person to call for assistance in an emergency.

Thus, Help-Lite provides the ideal safety solution for use in disabled toilets or similar compartments in hospitals, care homes, educational facilities, and sheltered accommodation etc.

Engineered with an IP65 enclosure for both internal and external mounting, Help-Lite includes battery back-up in the event of a mains failure, with up to 2 hours illumination from the standby battery.

Key features of Help-Lite

- HELP legend - visible when activated
- 400 Lumens output from 8 Watt T5 lamp
- High pitched sounder to get attention
- Pull switch activation
- Reset module with reassurance indicator
- Remote alarm indicator for warden's office

For further information, or a discussion about your particular project needs, contact Emergi-Lite.

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

EMEX Central Power Supply Systems Catalogue

This catalogue delivers an in-depth appraisal of the range of EMEX Central Power Supply Systems manufactured by Emergi-Lite, including AC/AC 230 V 50 Hz static inverters, AC/DC systems and 110 V supply solutions, plus the accompanying luminaires available to complete emergency lighting provision.

This catalogue is available free of charge from Emergi-Lite on +44 (0)113 281 0600.

Fire Product Catalogue

Detailing the extensive range of fire detection systems and products available from Emergi-Lite Safety Systems, under the banner of our Emergi-Fire brand. Our solutions include analogue addressable, conventional and wireless fire detection systems together with a wide range of devices to ensure comprehensive coverage for all applications.

This catalogue is available free of charge from Emergi-Lite on +44 (0)113 281 0600.

Log Book: Emergency Lighting

The Emergency Lighting Standard, BS 5266 part 8, calls for periodic testing over the life of the emergency luminaire. Records of the tests are required. The Emergi-Lite spiral bound Log Book is handy and robust for this purpose, and also provides some useful notes and advice on the standard and the test process.

Order Code	Description	List Price	Price Code
YLB-EL906	Log book - Emergency Lighting	£15.00	C

Log Book: Fire Detection and Alarm Systems

This A4 booklet, spiral bound and with hard backing, provides general guidance and advice as a supplement to BS 5839-1:2002. Space is provided for recording component lists, systematic logs, for making detailed weekly test reports and noting any modifications to the system in place.

Order Code	Description	List Price	Price Code
YLB-FD906	Log book - Fire Detection	£15.00	C

Emergency Lighting Guide: An Authoritative Guide to Emergency Lighting

This guide, available from May 2010 as a PDF via www.emergi-lite.com, provides key guidance on the various emergency lighting systems available, and their application and management in accordance with the latest BS EN and IEC standards.

Fire Guide: An Authoritative Guide to Advanced Fire Alarm System Design Techniques

The guide is a detailed technical publication for fire detection and alarm scheme design. It reviews the relevant laws and regulations, fire alarm design to BS 5839-1:2002 and advanced system design. Information is provided on other aspects, including radio linked systems, electrical safety and maintenance.

Order Code	Description	List Price	Price Code
YFAG-606	Fire Guide	£35.00	C

Thomas&Betts

Home to many well known brands and with over 100 years experience, Thomas & Betts provides a truly world-class level of quality, service and support. The electrical division in Europe provides the following key products:

Electrical products

An impressive range of high quality products to fasten, install, insulate, protect and connect electrical cables, with the confidence to achieve a highly professional result.

Ty-Rap® Ty-Fast® Ty-Met™ Ty-Grip™

Premium cable ties for the most demanding applications, including the Ty-Rap® cable ties with a steel locking barb and the Ty-Met™ self-locking stainless steel ties.

Shrink-Kon®

A wide variety of multi-purpose heat shrink tubing for use in insulation, protection, identification and strain relief.

Shield-Kon® Sta-Kon® Dragon Tooth® Color-Keyed®

A broad range of solderless termination systems for a variety of applications, including power cables, shielded cables and magnet wire.

Shureseal™ Shureflex®

A range of liquidtight flexible conduits & fittings for the protection of electrical cables in industrial applications, in metallic and non-metallic versions (including Nylon conduits & fittings).

Rezi-Kon™

A new range of cast resin joints for splicing and branching low voltage cables, in applications like street, leisure and airfield lighting, utility & home connections.

E-Klips®

A range of spring steel fasteners for quick, easy and reliable fixing of services to steelwork.

Earthing & Lightning protection solutions

With Furse, T&B is leading in the design, manufacture and supply of earthing and lightning protection systems.

furse

Through its range of products, Furse can provide complete and innovative solutions for lightning protection, surge protection and earthing applications.

Safety equipment for hazardous areas

DTS

DTS specializes in the provision of advanced safety lighting solutions for hazardous and hostile areas to a wide variety of industrial markets, including drilling, marine, oil & gas and pharmaceutical.

Street and amenity lighting control equipment

ROYCE THOMPSON
LIGHTING TECHNOLOGY IN CONTROL

Royce Thompson is a leading manufacturer of high quality, reliable and energy efficient photo-electronic lighting control equipment for street and amenity lighting.

Emergency lighting & fire detection systems

Throughout Europe T&B is well represented on the emergency lighting and fire detection markets with various leading brands providing dedicated solutions for safe evacuation of buildings and sites.

EMERGI-LITE
EMERGENCY LIGHTING & FIRE DETECTION SPECIALISTS

Emergi-Lite Safety Systems is the provider of advanced emergency lighting and fire detection systems, with field project support at the design stage through to commissioning and maintenance.

EXISTALITE
